

Features & Pricing

Avantgate are dedicated to providing you with a hassle free, high quality and reliable platform for hosting your website. Our exemplary support services are provided by a dedicated client manager. You can contact us by phone or electronically. We also have emergency after-hours services.

Our servers are housed in a secure, state-of-the-art data center here in **New Zealand** which we backup regularly for your total peace of mind. Hosting websites in New Zealand enables us to provide a fast and efficient platform that you can rely on.

Technical Features

At the click of a button Avantgate can enable a wide range of technologies for your website, including PHP, Python, and Apache ASP. Our packages include features that other companies often charge for as extras, including:

- Spam filtering
- Antivirus
- Unlimited **email** boxes
- Unlimited MySQL databases
- Unlimited **domains**
- Unlimited subdomains

We also offer support for ColdFusion, Frontpage, Tomcat, PostgreSQL, and phpMyAdmin (Licensing fees to the vendors sometimes apply). These and other great features, along with our commitment to keeping on-top of new technology, provides you with the most advanced applications and management tools. An application installer gives you easy access to a huge range of useful server software spanning back-office, collaboration, front office, personal, and web functions.

We've provided everything you need on a web server!

Features & Pricing

Pricing

Avantgate provide one simple package to get you going with your successful website. For only **\$36 (+GST)** per month your website will be hosted on an extremely high quality and reliable platform, you'll also have access to a huge range of features that come standard with Avantgate hosting. Most importantly, you'll experience the fantastic service of our support team.

Our hosting price includes:

- 500MB disk space
- 1GB of bandwidth
- Support for most web server languages
- Support for a wide range of leading technologies
- Regular automatic back-ups for your total peace of mind

Excellence
for \$36

Avantgate endeavour to provide the most up-to-date technologies and services to our customers. We get regular updates from our suppliers about any enhancements or upgrades being released so we can implement them in a timely manner. We recommend our customers sign up for our e-newsletter so that you're kept updated on improvements to our hosting and other important news.

If your website is getting lots of visitors or serving large amounts of content you might use more than 1GB of bandwidth per month. No problem! Any extra bandwidth used will appear on your next bill at \$17 (+GST) per GB. For every extra 1GB of bandwidth you use we'll also give you 250MB more disk space! Avantgate's website hosting package emphasises bandwidth use, as this is one way to measure the server performance your website needs and helps us ensure your website is getting the best from our infrastructure.

Supported Languages

SSI Support

Server Side Includes (SSI) is a simple server-side scripting language used almost exclusively for the web. As its name implies, its primary use is including the contents of one file into another one dynamically when the latter is served by a web server.

PHP Support

PHP is a widely-used general-purpose scripting language that is especially suited for Web development and can be embedded into HTML.

FTP (File Transfer Protocol)

File Transfer Protocol - is a network protocol used to transfer data from one computer to another through a network, such as the Internet.

Perl Support

Perl is a dynamic programming language created by Larry Wall and first released in 1987. Perl borrows features from a variety of other languages including C, shell scripting (sh), AWK, sed and Lisp. Perl was widely adopted because it provides powerful text processing facilities without arbitrary data length limits, as were present in many Unix tools at the time.

Python Support

Python is a dynamic object-oriented programming language that can be used for many kinds of software development. It offers strong support for integration with other languages and tools, comes with extensive standard libraries, and can be learned in a few days.

FastCGI Support

FastCGI is a language independent, scalable, open extension to CGI that provides high performance without the limitations of server specific APIs.

Miva Support

Miva Merchant is designed for success and provides you with access to all the tools you need to develop, maintain, and grow a thriving online store. There may be licensing fees to the makers of Miva. Avantgate provide a simple install tool for Miva.

Supported Features

CGI Support

CGI Is a standard protocol for interfacing external application software with an information server, commonly a web server.

Frontpage Support

This enables you to publish and modify your site using Microsoft FrontPage

SSL Support

Secure Socket Layer (SSL) technology allows web browsers and web servers to communicate over a secure connection. In this secure connection, the data that is being sent is encrypted before being sent and then is decrypted upon receipt and before processing. Both the browser and the server encrypt all traffic before sending any data.

Apache ASP Support

Apache ASP enables the development of dynamic web applications with session management and embedded Perl code. There are also many powerful extensions, including XML taglibs, XSLT rendering, and new events originally part of the ASP API

ColdFusion Support

ColdFusion is an application server and software development framework used for the development of computer software in general, and dynamic web sites in particular. In this regard, ColdFusion is a similar product to Microsoft ASP.NET, JavaServer Pages or PHP.

Web Statistics

Enables you to study the online behaviour of your website in order to improve it. We also recommend Google Analytics.

Custom Error Documents

Custom made error pages. For example, you can specify what your customers see should a link break or page fail on your website.

Client Control Panel

Access to Control Panel

The Plesk control panel is a comprehensive hosting management tool that let's you configure your hosting through a convenient web-based interface.

Domain Creation

Create new domains on your hosting account in a few clicks. Purchase a domain, point it at the Avantgate servers, and then setup the domain - very simple.

PHP Safe Mode Management

PHP safe mode helps to solve security problem encountered when using PHP.

Management of Shell access to server

In special cases you may need command-line or shell access to your server account. Please contact Avantgate if you require this.

Subdomains Management

Your account control panel allows quick set-up and management of sub-domains. A sub-domain looks like this: mysubdomain.myexampledomain.com

Scheduler Management

Your account control panel has schedule management, which you can use to schedule automatic reports etc.

Log rotation Management

All connections to the Web server and requests for files that were not found on the server are registered in log files. These log files are analyzed by the statistical utilities running on the server, which then present graphical reports on demand. To reduce the impact on your disk space, the disposal of these can be controlled in your hosting control panel.

Java Applications Management

Should you wish to run Java applications on your website, Avantgate can easily do this for you at the click of a button.

Web Statistics Management

You have control over how much information you want to see when you view these reports online or alternatively you can choose to have the report emailed to you as often as you like with specific information showing

Mailing lists Management

Should you want to do mass mail-outs to your customers, our servers are able to support this.

Spam filter Management

Spam Assassin is a powerful and effective Spam filtering system we have on our servers for first-level spam protection.

System Support

Tomcat Support

Tomcat is the Servlet container that provides the environment for executing Java Servlets. The Tomcat Add-on on our servers supports deploying and managing Tomcat web applications allowing users to set up hosting with JSP support.

Anti-virus

Best-of-breed technology implemented in the product line of the Dr.Web family is able to supply 'corporate-strength' protection against all major Internet security threats. This feature can be turned on for every mailbox.

PostgreSQL & PHP-PGAdmin Support

With one of the world's most advanced relational database management systems, We enable users to deploy and manage PostgreSQL databases right from the user interface with a few clicks. The PostgreSQL Add-on includes the web-based database administration software PhpPGAdmin giving users remote access to their PostgreSQL databases.

Language Packs

Our packs convert the text in your control panel interface to the language of your choice. Easily installed and activated, the language packs allow users who speak different languages to be assigned to the same system. Once installed, the languages are pervasive and can be selected at every level of the control panel.
